

The ED40 SCP Digital Lock

An economical solution where a digital lock is required with lever handle operation.

The lever operation is for low traffic doors that require easy operation by a lever on both sides of the door rather a knob.

Ideal for public building where ease of operation is important such as, cafés, restaurants and retail store room doors.

Installation is easy and the lever handle is universal. The Zinc Alloy body and coordinated rubber back plate help to protect from the weather if used externally.
